

iPevo

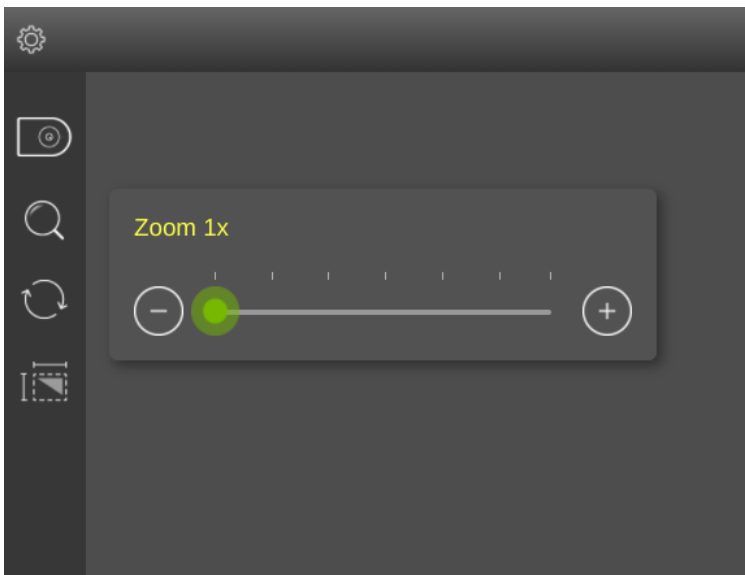

This is a quick tutorial on how to use your iPevo document camera on your Chromebook or Desktop.

The iPevo program can be found by searching your apps on your Chromebook or by simply going to the following link. (If you can not find the program on your desktop copy and paste the link below. Once you have found the app click it. You can pin the program to your taskbar by right clicking > pin.)

<chrome://apps/>

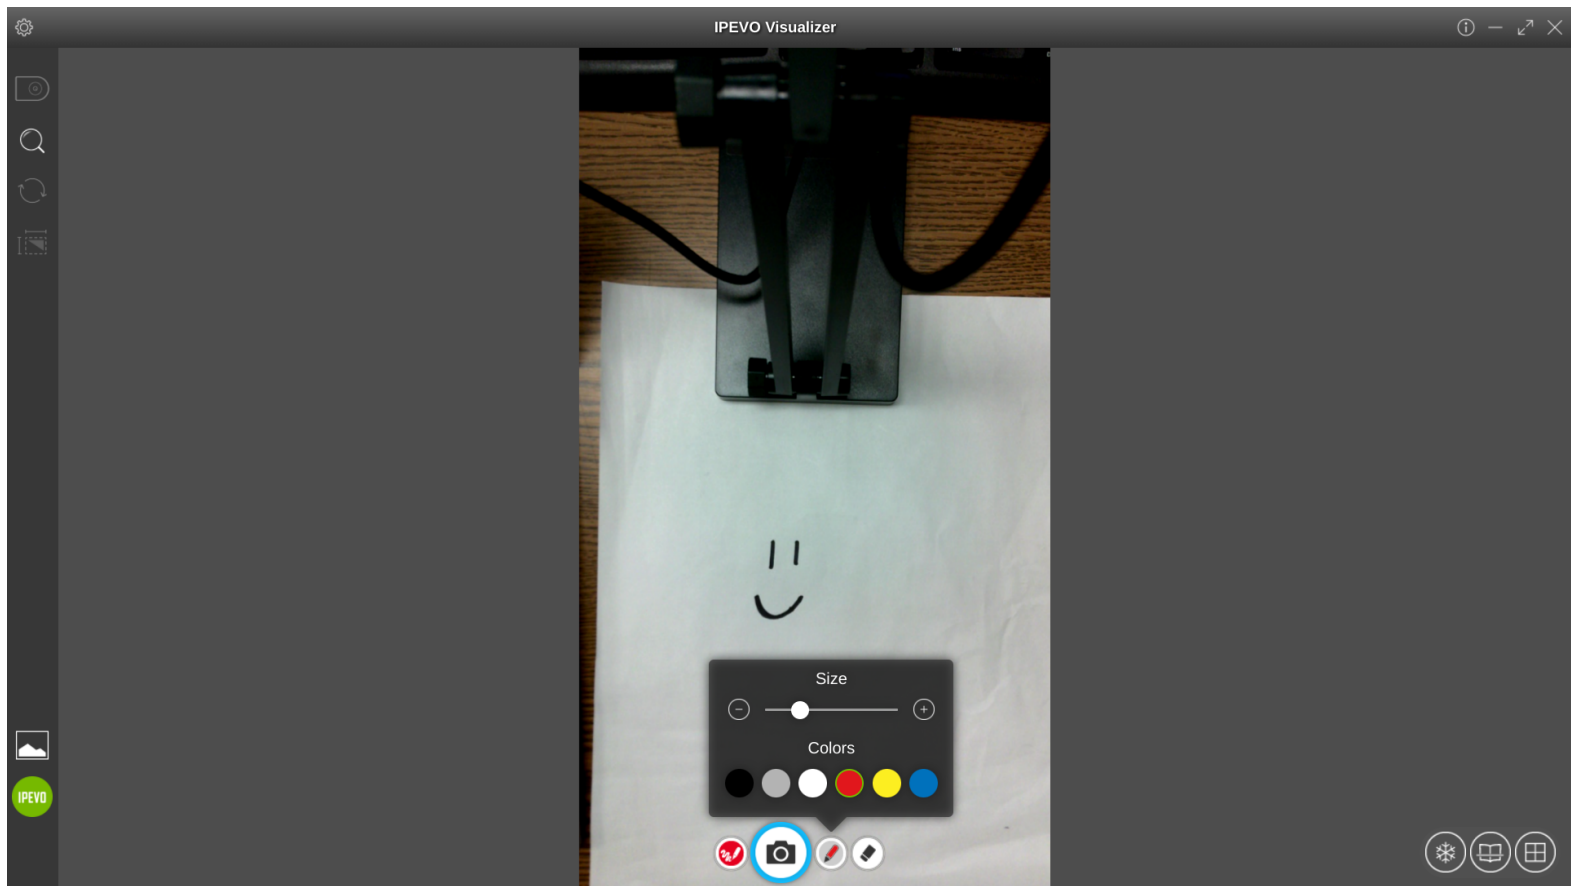

You can rotate your document camera in the program by clicking the 2 arrows going in a circle.

Zoom in with the camera by selecting the magnifying glass.

You can take a video or photo with your camera as well. Just hit the camera button at the bottom or hit the up arrow above the camera icon for more options.

There is a drawing feature built into the iPevo software. This can be useful with your new Chromebooks. If you want to take a photo of a document and then draw over it with the pencil tool that is an option. You can activate that by hitting the pencil to the left of the camera button.
